

## **AMENDMENTS TO THE SPECIFICATION**

Please replace Paragraph [0003] with the following paragraph rewritten in amendment format:

**[0003]** In this droplet jetting apparatus, a head unit which includes droplet jetting heads (ink jet heads) is provided so as to be movable with respect to a main body (see, for example, Japanese Laid-Open Patent Publication No. HEI ~~10-260367~~ 10-260307). Further, a pattern is drawn on a work by jetting droplets from the droplet jetting heads while moving the work placing portion and the head unit relatively to each other based on drawing pattern data which has been converted to a bit map. The drawing pattern data is normally created by an external apparatus such as a personal computer or the like, and during the drawing operation, a head driving control section controls the driving of each droplet jetting head based on this drawing pattern data.
